Whether it is a Cash Cassette or a Cash Drawer, a Stand, a Keyboard or a Customer Display. In each individual product group, security, reliability, flexibility and ergonomics are convincing.

**RELIABLE IN
STORMY TIMES.**

We are ANKER – A longstanding, innovative provider of hardware for the point of sale and a market leader in our segment. We are the inventors of the modern Cash Cassette and during the course of more than 140 years of our company's history, we have revolutionised the market and set new standards. We distinguish ourselves with outstanding product quality and a high degree of flexibility. In addition to tried-and-tested standard solutions, we also rely on customised project solutions. In order to keep pace with the times and react quickly to changing market requirements, we work closely together with our customers and partners. In this way, we succeed in continuously optimising our portfolio and offering innovative, high-quality solutions for the point of sale.

140 YEARS OF EXPERIENCE AND PASSION.

As a German company with a long tradition, we attach great importance to a regional value chain and a pragmatic and solution-oriented working method with quick reaction times. As a team, constantly on renewing the trust of our customers through excellent performance. The name ANKER guarantees quality, reliability, security and customer satisfaction. Our employees guarantee this with their personal signature on each product.

Particularly in the storm of industry development, it is important to rely on a partner, who offers first-class service and the highest security for your transactions. Outstanding products "Made in Germany" – after all, when it comes to your money, you should not compromise. Let us be your partner!

You will receive the appropriate solution from us for your company and your industry, in order to design the point of sale securely and reliably. Count on many years of durability with the highest product quality "Made in Germany". Your requirements are fulfilled with diligence, experience and passion.

1 MILLION SATISFIED USERS IN NUMEROUS INDUSTRIES.

FOOD RETAIL	PETROL STATIONS	AIRPORTS	VERY HIGH DURABILITY
PHARMACIES	FASHION	BAKERIES	HOME ENTERTAINMENT
140 YEARS OF EXPERIENCE	RESTAURANTS	SPORT	LEISURE
SHOPS/EXHIBITION CONSTRUCTION	DRUGSTORES	PREMIUM QUALITY	HOSPITALS

Integral thinking. Identifying issues. Developing solutions.

We have a history of always pursuing an integral approach, in order to meet customer requirements. Although we focus on the development and production of hardware, we are still very familiar with any linked processes, circumstances and processes relating to the POS. Our portfolio is comprised of a large number of exciting, high-quality products. Tried and tested millions of times at the point of sale, constantly in further development and reliable for many years. They can be used across many industries and are essential for many customers. The identification of challenges and applications for many industries is in our DNA. Knowing which details and circumstances need to be considered at the POS makes it possible to develop a targeted solution for you. Regardless of whether a standard product comes into question or a customised product development is performed.

A PIONEER FOR UNIQUE SOLUTIONS.

Thanks to many years of experience at the POS, we have established four guidelines:

- 1 Innovation**
Identifying trends early, developing products that keep pace with the times and are always a step ahead.
- 2 Quality**
Highest quality in products and processes.
- 3 Security**
Our solutions and products offer the highest security at the POS.
- 4 Flexibility**
Standard products in high quantities, fast and cost-effectively delivered or customised solutions – everything from a single source.

As a company with a long tradition, which is based in Bielefeld, we are distinguished by many years in the development and production of components for the point of sale. Many longstanding employees pass this knowledge on from generation to generation. They stand for our values and preserve our principles:

- Innovation 1
- Quality 2
- Security 3
- Flexibility 4

WE HAVE A TRADITION OF EMBRACING INNOVATION.

Furthermore, we have always been focused on the future. New market requirements are identified and successfully mastered. ANKER has always been an innovative company with a great desire for progress. Many inventions in the POS industry, which are now a matter of course, were first thought of or launched on the market by ANKER ...

... and we are aiming to delight you with even more modern solutions for the POS. Today and in the future.

1 Innovation

2 Quality

3 Security

4 Flexibility

Products “Made in Germany”

Our outstanding products are developed for you from the first design onwards at our location in Bielefeld in East Westphalia. Production then takes place using a flexible reliable regional network and our production plant in Bielefeld.

Convincing premium quality

With all materials used, as well as with the production of our products, the highest quality is relied upon.

RESPONSIBILITY FOR HIGH-QUALITY PRODUCTS.

ANKER quality for reliability at the POS

Trust in secure products at all times at the point of sale! Numerous measures are taken in order to guarantee the highest quality.

ANKER quality management Our integral ANKER quality management uses operational and financial quality key figures. With cross-functional quality rounds for proactive and effective problem identification, we permanently ensure the unique quality of our ANKER products.

ANKER tests and inspection All products are subjected to extensive long-term tests. High resilience and durability of the products is ensured by internal and external test centres.

ANKER responsibility The employees in final assembly “sign” each individual completed product. With their name, they guarantee the high quality of their work.

ANKER investments In order to continuously optimise the product quality, new production and development technologies are invested in on a regular basis.

Security has the highest priority at the point of sale. Rely on the utmost reliability: With ANKER products, you play it safe. They guarantee you the highest protection during the entire process chain at the POS. Our unique lockable cash containers protect your valuable cash on the way to the POS, directly at the checkout counter and on the way back to the pay-office. In addition to this, all of your tablets and EFT terminals mounted with an ANKER solution are protected against theft and manipulation at the POS.

Count on robust and intelligent products for secure transactions at all times. From special security locks, to security seals, right up to reliable workmanship of high-quality materials, ANKER products guarantee safety for your money.

- Innovation 1
- Quality 2
- Security 3
- Flexibility 4

FOR 100 % SECURITY AND RELIABILITY AT THE POS.

ANKER Standard Cash Cassette SCC

Unique ergonomic compartment configuration

The first Flip-Top cassette in the world is our ANKER Standard Cash Cassette SCC. It has already been ensuring reliability and security at the POS since 1987. The unique **shape and configuration of the coin and note compartments has been rigorously developed with the assistance of ergonomics experts**. Today, the SCC, which has been continuously improved, is still the industry standard in food retail. It guarantees you a smooth-running and quick process for every cash-transaction.

Technical data

Width	Height	Depth	Weight	Interface
459 mm	100 mm	155 mm	1,7 kg	compatible with all systems

> Ergonomic, unique inner partitioning

> Sloped coin compartments

> Usable without a lock

> Secure transport in a fully-fledged cash cassette

> Base plate with cable protection

Ergonomic inner partitioning – coin compartments with sloped front

Closed cassette without lock

Fitted cassette

Configuration with coin compartments

Base plate

The ANKER principle: Separate base plate and cash cassette

The SCC system is composed of a base plate and cash cassette. The base is securely mounted on the cash desk as an electric trigger unit. In contrast, the cash cassette can be completely removed. This guarantees you **secure transport of your cash holdings** in a fully-fledged cash cassette, without additional lids and locks. The simple system for the removal of the cassette also enables an extremely quick and secure change of the cashier: log-off, unlock and go.

Freely selectable locking mechanisms for high security

The base plate of the SCC is activated and opened electronically by the cash system. The open state of the SCC is determined by a switch that is integrated in the base and is sent directly to the cash system. The connection cable of the base is prevented from loosening by a **cable protector**. The SCC Cash Cassette can be **used completely without a lock**, with special locking mechanisms or with a high-quality lock. Therefore, it adapts to your processes and requirements without any problem.

Flexibility meets spaciousness

With eight coin compartments and four note compartments, the cassette provides you with a large amount of space. The **sloped front of the coin compartments** makes it very easy and convenient to remove the coins. If you want two different types of notes or vouchers to be stored separately from one another, a note separator is used. The note compartments are configured such that particularly large notes cannot be easily removed by unauthorised access and therefore offer you extra security. This improves the workplace ergonomics and provides more security.

Functional with conventional cash systems

You can use the SCC with all well-established cash register systems. A cash register system change only requires the replacement of the cable or the base. The cassette itself can continue to be used unchanged.

ANKER OmniOption Cash Cassette OCC

Limitless flexibility

All requirements for design, flexibility, compatibility and security of a modern cash cassette are fulfilled with our ANKER OmniOption Cash Cassette OCC. Benefit from a multifunctional cash cassette at your POS. It is made of a robust plastic housing and **flexible inner partitioning**. It can be used for all currencies and is also excellently suited to international use.

Controlled electronically directly by the cash system, the OCC can be flexibly adapted to your requirements and processes. Whether it is completely **without a lock or fitted with a quality lock** – You have the choice. An optionally usable security key lock offers you additional security.

Technical data

				
Width 460 mm	Height 100 mm	Depth 160 mm	Weight 2.0 kg	Interface compatible with all systems

› Classic but flexible coin and note compartments

› Rail-guided opening mechanism for the lid

› Usable without a lock

› Secure transport in a high-quality cash cassette

› Base plate with cable protection

Rail-guided opening mechanism of the lid

Locked cassette

Fitted cassette

Cassette with removed coin and note compartments

Base plate

Flexibility inside

The partition walls of the coin compartments are variably intermateable, suitable for any currency. An additional compartment allows you to store tall notes and important vouchers in it. The coin and note compartments are optionally installed on the right or left. This is more convenient for cashiers and particularly provides more protection from unauthorised access because the inner compartments can be positioned at large distance from the customer.

Convenience for payment transactions

The wide opening angle of the lid allows optimum access for the cashier. The OCC does not spring open unintentionally, is guided **and mechanically accelerated and decelerated when opening**. The result of this is longer durability, a stable opening angle and a constant opening speed.

More secure transport into the back office

The system is comprised of a base and a cash cassette. The base is securely mounted on the cash desk, the OCC is inserted on it and locked in. The electric trigger unit is located in the base. The connection cable is **held in place with a cable protection**, which prevents the cable from slipping out.

The cassette can then be completely removed. Additional work steps, such as putting on a lid and locking an insert, are not necessary – A fully-fledged cash cassette made of sturdy plastic is available to the cashier personnel **for transporting** from the cash counter to the back office.

Robust and longlasting

The OCC is produced from durable and recyclable plastic. Its design guarantees a long service life. The easy-to-clean surface is impervious.

Compatible with all well-established cash systems

All conventional cash register systems are compatible with the OCC. For a system change, you only need to replace the cable or the base. The cassette can continue to be used unchanged.

Cash Drawers

ANKER Euro Cash Cassette ECC

Ready for any currency

Our ANKER Euro Cash Cassette ECC is based on the same concept as the SCC. The difference is its size and the split of the coin and note compartments. This cash cassette **is the plastic cassette with the largest capacity** in our portfolio. Due to its configuration, it provides space available for all currencies and can hold a large volume of change.

The ECC is also flexible in terms of the closing variant. As it is electronically controlled and opened by the cash register system, **it can be completely used without a lock, if required**. The ECC can be used with a quality lock, various, specific locking mechanisms or without a lock. For straightforward manual opening of the cassette, products are available for you, such as our manual opening trigger. An optional security key lock offers you additional security.

Technical data

Width 482 mm	Height 100 mm	Depth 175 mm	Weight 1.9 kg	Interface compatible with all systems

› Up to nine coin compartments

› Larger volume for higher cash holdings

› Individually insertable coin compartments

› Voucher slot

› Usable without a lock

Cassette with 9 coin compartments

Locked cassette

Fitted cassette

Customised configuration with coin compartments

Base

All currencies intelligently stored

Up to nine coin compartments, six note compartments and a voucher compartment are available. The **voucher slot on the front** of the ECC allows you to securely insert and store vouchers, without opening the cash cassette. The note compartment can additionally be protected from unauthorised access with a cover.

The ANKER principle: Separate base plate and cash cassette

The ECC system comprises of a based plate and cash cassette. The base is securely mounted on the cash counter as an electronical trigger unit. The cash cassette can be taken out completely. This guarantees secure transport of your cash holdings in a fully-functional cash cassette, completely without additional lids and locks. The simple system for the removal of the cassette also enables a extremely quick and secure change of the cashier: log-off, unlock and go.

Compatible with all well-established cash register systems

All conventional cash register systems are compatible with the ECC. For a system change, you only need to replace the cable or the base. The cassette can be used unchanged.

ANKER Universal Cash Cassette UCC

Metal cassette according to the ANKER principle

We also offer a solution to the proponents of metal housings, with the ANKER Universal Cash Cassette UCC, which fits in the well approved ANKER principle. The assembly of the outer housing is performed in the established manner, on a base plate. This allows **easy dismantling for cleaning purposes**. However, in contrast to our plastic cassettes, the base is delivered without any electronics, as they are installed in the outer housing. Upon request, the assembly of the outer housing is also possible without a base.

The UCC is directly opened electronically by the cash register system. The outer cassette is available with a quality lock or completely without a lock. For the inner cassette, a quality lock or a turnkey are available. The turnkey is a keyless version, with which a bolt in the lid can be engaged, to close the inner cassette.

Technical data

Width	Height	Depth	Weight	Interface
460 mm	100 mm	169 mm	4.84 kg	compatible with all systems

› Removable outer cassette: a plus in terms of cleanliness

› Flexible configuration of the coin and note compartments

› Inner cassette with integrated lid

› User-friendly with a removable cable

Inner cassette with integrated lid

Locked cassette

Fitted cassette

Outer cassette and fitted inner cassette

Base plate

Reliable at every POS

The extremely light inner cassette of the UCC made of plastic has an integrated sturdy lid. This makes the tedious handling unnecessary, which would have been created with a separate cover. Additional separate inner cassettes are available for changing cashier personnel. The removal and insertion of the inner cassette is made significantly easier for you due to the integrated and retractable carrying handles. The handles are attached to the side, which ensure optimum weight distribution and easy removal of the insert.

Longlasting and user-friendly

You can mount the outer cassette directly onto the cash counter or lock it in using the previously mounted base plate. This attachment of the outer cassette is ideal for simple and quick exchange and straightforward cleaning. This ensures a plus in terms of cleanliness and servicing of the product. **The cable of the UCC** can be easily and economically removed.

Ergonomic benefits

The coin and note compartments, as well as the separate voucher compartment, can be configured by you within the inner cassette on the left or right, as you wish. This improves the workplace ergonomics and provides more security at the cash counter, as the inner compartments can be positioned at larger distance away from the customer.

ANKER Cash & Carry Cash Cassette CCC

Keyless for more security

The ANKER design principle, comprised of a cassette and a base, has inspired you, but you do not want entirely forego metal? Then the ANKER Cash & Carry Cash Cassette CCC is just the thing for you. The base, outer housing and cash insert made of galvanised steel, together with the stainless steel lid, form a closed unit. The CCC does not need any keys. The opening of the outer housing is controlled by the cash register system. A lock is not necessary. The lid of the cash insert is secured with a magnet after being removed from the housing, so that a lock is also not needed on the inside.

The coin and note compartments in use can be inserted on the left or right side of the cassette, as required. The cash cassette insert has eight weighable coin compartments.

Technical data

Width	Height	Depth	Weight	Interface
484.6 mm	103 mm	168 mm	8.4 kg	compatible with all systems

- > Removable outer cassette: a plus in terms of cleanliness
- > Lid of the outer cassette made entirely out of stainless steel
- > Metal inner cassette with integrated lid
- > Separate base plate
- > Easy to service with removable cable

Sturdy metal inner cassette

Locked cassette

Fitted cassette

Fitting with coin cups possible

Base plate

High-quality materials. Careful workmanship.

With the CCC, you are receiving an extremely robust and well thought out steel design, which is made of high-quality and carefully processed materials. The lid of the CCC is produced entirely from stainless steel and thanks to its rough structure, it is particularly resistant to scratches. Furthermore, the lid is resistant to corrosion and acid.

The CCC metal cassette is opened electronically by the cash register system, without keys. The open state of the cassettes is determined via the switch that is integrated into the cassette base and directly transmitted to the cash register system.

Different from the others

Thanks to the ANKER principle, with the CCC, you are receiving a metal cassette, which fulfils the highest standards in durability, as well as user friendliness and easy serviceability. Thanks to the **separately attachable base plate, the outer cassette can be removed for cleaning and servicing.** The connection cable is not permanently attached to the cassette, but rather, it is connected via the base plate. Cost-intensive and time-consuming services are therefore minimised considerably.

User friendliness is very important and quick, straightforward removal of the cash insert makes a significant contribution to this. This is why the CCC has been fitted with a **permanently integrated lid for the cash insert.** A separate lid is therefore not necessary for closing the inner cassette.

ANKER Universal Cash Drawer UCD

Intelligence inside

Our ANKER Universal Cash Drawer UCD has proven itself worldwide at checkouts in all areas of retail and restaurants. It offers you unrivalled functionality at the point of sale, is user friendly, versatile and sturdy. Its high-quality plastic housing is also lightweight and robust. The UCD is also absolutely reliable in heavy use.

It has a large storage capacity, but is small in size. Its easily **removable and foldable cash insert** simplifies handling for you, ensures problem-free transport and particularly space-saving storage in your back office. The coin and note compartments can be partitioned flexibly and can also be easily used for international currencies.

Technical data

				
Width 385 mm	Height 95 mm	Depth 435 mm	Weight 4.75 kg	Interface compatible with all systems

› Foldable cash insert

› Space-saving storage in the safe

› Easily replaceable trigger mechanism

› Flexible partitioning of the coin and note compartments

Foldable cash insert

Opened drawer

Fitted drawer insert

Fitted drawer insert half-folded

Closed insert

Flexible, secure and space-saving

You can use and install the UCD on or – with the help of mounting brackets – under the counter. The cash insert is folded up, locked with a security key lock and quickly removed as a closed box. This compact box can **be transported securely and easily, as well as being stowed away in the safe**. Separate, unwieldy lids are a thing of the past. A safe that needs to have the same depth as a drawer is also no longer required. This will save space in your back office significantly.

Adaptable compartment configuration

The inside of the UCD **can be partitioned flexibly and is adaptable to the respective currency**. In the standard configuration, there are four note compartments and eight coin compartments. Two coin compartments can easily be set up as a fifth note compartment. The remaining six coin compartments can be increased to eight again with additional separators. In the front, the UCD has a wide voucher slot, so that the cash drawer does not need to be opened for stowing vouchers.

Compatible with all conventional cash register systems

You can use the UCD with well-established cash systems. On the back, it has a **replaceable, easy to service trigger mechanism**, which enables cost-effective adaptation to various systems. In the case of a system change or for other reasons, you only need to install a new trigger mechanism.

Manual or electronic opening option

The UCD is opened by the cash register system. When equipped with a quality lock, manual opening is also possible. The lock is available in up to 50 locking variants. The open state of the cash drawer is determined by a switch that is integrated into the trigger mechanism and is sent directly to the cash register system.

ANKER accessories

Coin cups

Save time, simplify payment transactions

Weighable coin cups have become indispensable. They simplify the cashing-up process and save valuable time. ANKER Coin cups are made of high-quality ABS plastic and are tailored to your ANKER cash cassette or cash drawer. The coin cups can be used in your existing cassette or drawer and filled as usual coin compartments. You can order the coin cups together with your ANKER cash cassette or drawer. This way, you not only save valuable time and money with cashing-up but also logistics. Our coin cups are compatible with all standard cash scales.

- › Cost and time savings through quick cashing-up processes
- › No differences with cashing-up due to weight determination
- › Tailored to your ANKER cash cassette or cash drawer for working quickly and conveniently
- › Less procurement effort: Order the coin cups right away!

Coin cups

Mountings

Ensure clarity at the POS

Who has never experienced it? The discussion about which note the customer committed when paying at the checkout. Avoid such situations and support the cashiers and customers. The self-adhesive mountings by ANKER made of high-quality plastic or stainless steel, are a simple, yet effective solution. Attached at any position in or on the cash cassette or cash drawer, the cash that has been handed over can be inserted into the mountings where it is easily visible. The notes are only sorted into the cassette once your customer has received the right change. This completely does away with unpleasant moments or discussions.

- › Helps to avoid conflict situations with customers
- › Self-adhesive and easy to add at any time
- › Fewer differences with cashing up
- › Economical, effective and compatible with every cassette and drawer

Mountings in use

Various mountings

Inkiess cash inserts

Inkiess coin inserts

Determine coin quantities in seconds

Inkiess coin inserts for your ANKER cash drawer or cash cassette are particularly a great alternative, if you only need to cash-up a few cash desk stations. You optimise your coin settlement by “reading off instead of counting”. The cash holdings of your checkout can be read off within short periods of time using the scales, regardless of the coin quantity. For you, this saves an enormous amount of time and effort. The entire coin settlement costs you less than 2 minutes.

- › Comprehensible through “reading off instead of counting”
- › Enormous time saving for cashing-up
- › Fewer differences by avoiding counting errors

Note separator for the SCC

Note separator for the SCC

More space in the SCC

The ANKER Standard Cash Cassette SCC is delivered with a note separator for the note and voucher compartments. But even with this, there is not always sufficient space for notes and vouchers. With the cost-effective, retrofittable ANKER note separator for the note compartment, the SCC is flexible and spacious. The robust note separator, made of metal, is simply inserted into the existing compartment, if required. This makes an additional compartment available to you. The metal design has a long service life, even under heavy use.

- › Retrofittable in every ANKER Standard Cash Cassette SCC
- › Longlasting design for more cost efficiency
- › Greater flexibility and more space for notes and vouchers

Cassette opening station

Security in the entire process chain

The security that is guaranteed with the use of the SCC and ECC continues in the pay-office. The ANKER cassette opening station has been developed for this purpose. The ideal solution, when you use a cash cassette without a lock or do not give keys to the personnel. Completely mechanical, it offers quick and secure opening in the cash office. The cassette is placed onto a base plate, where it is very securely positioned. A mechanical push button opens the cassette. What makes the cassette opening station particularly secure is the fact that the push button is secured with a key. This way, the cassette can only be opened by authorised personnel.

- › Opening of the cassettes only possible by authorised personnel
- › Good stability and handling of the cassette
- › Mechanically operated and therefore independent from any power supply
- › Secure alternative for opening cassettes without a cash system

Manual trigger

Fast cassette opening in the back office

The manual trigger by ANKER is a compact solution for opening your cash cassettes mechanically. If you have decided to use an ANKER cash cassette without a lock or not to issue any keys to the personnel, with the manual trigger, you make it possible to quickly and easily open cassettes manually in the pay-office: completely without any further keys or electrical connections. The manual trigger is inserted in the rear cutout of the cassette. It can then be opened manually with a pin. Simple and space-saving for your cash office.

- › Low space requirement due to compact design
- › Cost-effective solution for mechanical opening of SCC, OCC and ECC
- › Mobile solution: can be used wherever it is needed
- › No keys or electricity required

Cassette opening station

Manual trigger

USB adapter

RS232 adapter

Mounting frame

Mounting bracket

PC Cash Control

Cost-effective alternative to cash register hardware

Cash cassettes or cash drawers are connected to a cash register system or a receipt printer, from which they receive the opening signal. But what do you connect the drawer to, if specific cash register hardware is not available or if you issue your receipts on an A4 printer or want to send the receipt to the customer as a PDF file? In these cases, the tried-and-tested ANKER Cash Control Adapters are used. You can choose between the USB or RS232 interface. The connection cable of the cassette is attached to the adapter which is connected to the USB or RS232 interface of your system.

Mounting frame & mounting bracket

Difficult installation conditions resolved quickly

While a new cash desk is already prepared by the manufacturer for the installation of your required cassette, with cash area conversions, it may occur that a desk is not suitable for the installation of a cash cassette due to the lack of an undersurface. This is where ANKER mounting frames can help. Tailor-made to fit your cassette, the frames are inserted in the work surface of the desk and thereby create a sturdy foundation for the assembly of an ANKER cassette base.

The ANKER Universal Cash Drawer mounting brackets fulfil a very similar function. For the mounting under the desk of your cash drawer, they ensure secure positioning and permanent fastening of your drawer.

Cash Cassettes &
Cash Drawers

ANKER accessories

Interfaces

A variety of future-proof connections

ANKER has been producing cash cassettes and cash drawers for many decades. Over time, the types of interfaces for the respective POS systems have changed considerably. While years ago, there were still many individual types of connections, you now benefit from progressive standardisation. Most of today's POS systems use widely prevalent and modern interfaces. ANKER also keeps the latest interfaces available for you and provides future-proof connection options.

The new generations of base plates or trigger mechanisms are available as standard with a 5-pin DIN interface or USB type B. For connecting to your cash system, RJ11, LAN and USB type A interfaces are also available, among others. If you require interfaces other than those that are illustrated, you can benefit from our many years of experience in the market. Please contact us, so we can find the right individual solution for you.

Emergency release mechanisms

Armed for emergencies

Every ANKER cash cassette and cash drawer can be operated without a lock or with a special locking mechanism. For situations in which the cash cassette or cash drawer cannot be opened electronically or via the cash system, such as in the case of a power cut or the possible crash of the cash system, ANKER can offer you an emergency unlocking mechanism. This emergency unlocking mechanism does not require any electricity or a connection to the cash system.

- › If an emergency release mechanism is of interest to you, we will be pleased to provide you with more information.
