## CONFIDENTIALITY AGREEMENT

BY USING THIS DOCUMENT, YOU AGREE TO ABIDE BY THE TERMS OF THIS AGREEMENT.  
PLEASE RETURN THIS DOCUMENT IMMEDIATELY IF YOU DO NOT AGREE TO THESE TERMS.

1. This document contains confidential, proprietary information of Seiko Epson Corporation or its affiliates. You must keep such information confidential. If the user is a business entity or organization, you must limit disclosure to your employees, agents, and contractors who have a need to know and who are also bound by obligations of confidentiality.
2. On the earlier of (a) termination of your relationship with Seiko Epson, or (b) Seiko Epson's request, you must stop using the confidential information. You must then return or destroy the information, as directed by Seiko Epson.
3. If a court, arbitrator, government agency, or the like orders you to disclose any confidential information, you must immediately notify Seiko Epson. You agree to give Seiko Epson reasonable cooperation and assistance in resisting disclosure.
4. You may use confidential information only for the purpose of operating or servicing the products to which the document relates, unless you obtain the prior written consent of Seiko Epson for some other use.
5. Seiko Epson warrants that it has the right to disclose the confidential information. SEIKO EPSON MAKES NO OTHER WARRANTIES CONCERNING THE CONFIDENTIAL INFORMATION OR ANY OTHER INFORMATION IN THE DOCUMENT, INCLUDING (WITHOUT LIMITATION) ANY WARRANTY OF TITLE OR NON-INFRINGEMENT. Seiko Epson has no liability for loss or damage arising from or relating to your use of or reliance on the information in the document.
6. You may not reproduce, store, or transmit the confidential information in any form or by any means (electronic, mechanical, photocopying, recording, or otherwise) without the prior written permission of Seiko Epson.
7. Your obligations under this Agreement are in addition to any other legal obligations. Seiko Epson does not waive any right under this Agreement by failing to exercise it. The laws of Japan apply to this Agreement.

## CAUTIONS

1. This document shall apply only to the product(s) identified herein.
2. No part of this document may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of Seiko Epson Corporation.
3. The contents of this document are subject to change without notice. Please contact us for the latest information.
4. While every precaution has been taken in the preparation of this document, Seiko Epson Corporation assumes no responsibility for errors or omissions.
5. Neither is any liability assumed for damages resulting from the use of the information contained herein.
6. Neither Seiko Epson Corporation nor its affiliates shall be liable to the purchaser of this product or third parties for damages, losses, costs, or expenses incurred by the purchaser or third parties as a result of: accident, misuse, or abuse of this product or unauthorized modifications, repairs, or alterations to this product, or (excluding the U.S.) failure to strictly comply with Seiko Epson Corporation's operating and maintenance instructions.
7. Seiko Epson Corporation shall not be liable against any damages or problems arising from the use of any options or any consumable products other than those designated as Original EPSON Products or EPSON Approved Products by Seiko Epson Corporation.

## TRADEMARKS

EPSON® and ESC/POS® are registered trademarks of Seiko Epson Corporation.

General Notice: Other product and company names used herein are for identification purposes only and may be trademarks of their respective companies.

## GENERAL DESCRIPTION

### 1. Application

These specifications apply to the DM-D210 customer display.

### 2. Features

- 1) Various expressions can be displayed on the 20-column by 2-line dot matrix.
- 2) The vacuum fluorescent display provides a wide viewing angle, long life, high reliability, and high display quality.
- 3) The green fluorescent color is easy on the eyes.
- 4) The display panel is movable so that it can be adjusted for the best viewing angle (up, down, right, and left.)
- 5) Control is based on the EPSON ESC/POS<sup>®</sup> standard command set, which provides good general utility and the following features:
  - User-defined characters can be downloaded.
  - Reverse characters can be specified.
  - The specified display area can be controlled by the window function.
  - International character sets are installed.
  - The specified data can be displayed repeatedly by executing a macro.
  - The brightness can be adjusted according to the ambient conditions.
  - Memory switches that enable customizing are installed.
- 6) An interface based on EIA/TIA RS-232 is included, with baud rates from 2400 to 115200 bps. (bps: bits per second)
- 7) Because a printer interface (based on RS-232) is included, it is possible to connect both a printer and the display by preparing only one port for RS-232 on the host computer side.
- 8) The design matches EPSON printers (TM series and IM series).

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 1	SHEET IV

## 1. GENERAL SPECIFICATIONS

### 1.1 Display Specifications

- 1) Vacuum fluorescent display
- 2) Number of characters: 40 (20 columns × 2 lines)
- 3) Display color: Green (505 nm)
- 4) Brightness: 700 cd/m<sup>2</sup>

### 1.2 Character Specifications

- 1) Character type:
  - Alphanumeric: 95
  - International characters: 37
  - Graphic characters: 128 × 12 pages
- 2) Character font: 5 × 7 dot matrix, comma, period, annunciator
- 3) Character size: 6.5 mm {.256"} × 11.3 mm {.445"}  
Refer to Figure 1.2.1 for details.
- 4) Character pitch: 9.9 mm {.390"}  
Refer to Figure 1.2.1 for details.

Figure 1.2.1 DM-D210 Character Dimensions

EPSON	TITLE  DM-D210 Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 2	SHEET 1

## 1.3 Electrical Specifications

- 1) Power supply types to be applied: PS-170, PS-180, PA-6508, PB6509, PB-6510, PA-6511, PA-6513 (when the optional stand DP-210 is used)
- 2) Rated voltage: 11.4 - 48 VDC
- 3) Rated current: 0.4 A (max.) (at 11.4 V)

## 1.4 Environmental Conditions

- 1) Temperature: Operating: 5° to 40°C {41° to 104°F}  
Storage: -10° to 50°C {14° to 122°F}
- 2) Humidity: Operating: 30% to 85% (non-condensing)  
Storage: 30% to 90% (non-condensing)
- 3) Impact resistance: When unpacked: When one edge of the display is lifted and released from a 5 cm (1.97") height, visual inspection should detect no abnormalities. (Drop procedure should be repeated for four edges.)  
When packed: After being dropped from a 90 cm {35.43"} height (one corner, three edges, six surfaces) when packed in the Epson standard container, visual inspection should detect no abnormalities in the internal or external conditions.

## 1.5 Reliability Specifications

- 1) MTBF: 20,000 hours (Vacuum fluorescent display only), a half-life period

## 1.6 Safety and EMI Standards Applied

- 1) Europe: CE marking: EN55022 class B  
EN55024  
Safety standard: EN60950
- 2) North America: EMI: FCC class A / ICES-003 class A  
Safety standard: UL1950 / CSA C22.2 No.950
- 3) Japan: EMC: VCCI Class A  
JEIDA-52
- 4) Oceania EMC: AS/NZS3548 (CISPR22) class B

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 3	SHEET 2

## 1.7 Overall Specifications

- 1) Color: Epson cool white (for model-x0x)  
Epson dark gray (for model-x1x, except DP-503 and DP-504)
- 2) Dimensions and mass

Items	Display main unit	Optional stand DP-210	Optional installation metal and pole DP-502	Optional installation base unit and pole DP-503	Optional installation base unit and pole DP-504	Optional installation metal and pole DP-505

## 2. INTERFACE

### 2.1 Interface Connector

The display main unit of the DM-D210 has an interface connector for connection to the DM-D stand and the option to install the DM-D210 to IM series or TM series. (refer to Figure 2.1.1)

Figure 2.1.1 Interface Connector (Front)

### 2.2 Interface Specifications

#### 2.2.1 Signal specifications

- 1) Specifications are based on EIA/TIA RS-232.
- 2) Data transmission method: Serial
- 3) Synchronization: Synchronous
- 4) Handshaking (\*1): DTR/DSR control
- 5) Signal levels: MARK = -3 to -15 V logic = "1" OFF  
SPACE = +3 to +15 V logic = "0" ON
- 6) Baud rate (\*1): 2400, 4800, 9600, 19200, 38400, 57600, 115200 bps  
(bps: bits per second)
- 7) Data word length (\*1): 7 bits, 8 bits
- 8) Parity (\*1): None, odd, even
- 9) Stop bits: 1 or more

(\*1) Selected by the DIP switches.

#### 2.2.2 Communication Buffer size

80 bytes

EPSON	TITLE  DM-D210 Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 8	SHEET 7

## 2.3 Connector Signal Assignments

**Table 2.3.1 Connector Signal Assignments**

Pin Number	Signal Name	Signal Direction	Function
1	FG	-	Frame ground
2	TXD	Output	1) When the DM-D210 is connected with the data pass through (*1): Transmit data to the printer 2) When the DM-D210 is connected in a stand-alone: Transmit data to the host
3	RXD	Input	Receive data from the host
4	DSR	Input	This indicates whether the printer is ready to receive data. 1) When the DM-D210 is connected with a data pass through (*1): [MARK]: The printer is not ready to receive data [SPACE]: The printer is ready to receive data 2) When the DM-D210 is connected in a stand-alone: [MARK]: The host is not ready to receive data [SPACE]: The host is ready to receive data
5	DTR	Output	This indicates whether the display is ready to receive data (*2). [SPACE] The display can receive data. [MARK] The display cannot receive data. [DTR MARK] DTR goes to MARK under the following conditions: ① The period from when the power is turned on to when the display first becomes ready to receive data. ② When the self-test is executed. ③ When the remaining space in the receive buffer becomes 40 bytes or less (buffer-full state). ④ When [DSR MARK] is on, if the printer is selected by a peripheral device command. (When the DM-D210 is connected with the data pass through.) (*1) [DTR SPACE] DTR goes to SPACE under the following conditions: ① When the display first becomes ready to receive data after power-on. ② When the self-test has ended. ③ When the remaining space in the receive buffer becomes 50 bytes or more after it became 40 bytes or less once.
6	SG	-	Signal GND
7	PS	-	Power supply terminal
8	PG	-	Flyback line for power supply

NOTES: (\*1) For the data pass through and the stand alone, refer to Section 3.2.1 Connection methods for detail.

(\*2) [DTR MARK] can be set by the **US v** command. This case differs from the above-mentioned [DTR MARK].

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 9	SHEET 8

### **3. SPECIFICATIONS OF OPTION STAND**

#### **3.1 Option Stand Connector**

The option stand is equipped with an interface board, which has connectors for the display panel, printer, power supply, and host computer. (Refer to Figure 3.1.1)

**Figure 3.1.1 Option Stand Connector**

NOTE: Figure 3.1.1 shows the DP-210-1x1.  
The DP-210-1x2 does not include connectors and the interface board.

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 10	SHEET 9

## 3.2 Option Stand Interface Specifications

### 3.2.1 Connection diagram

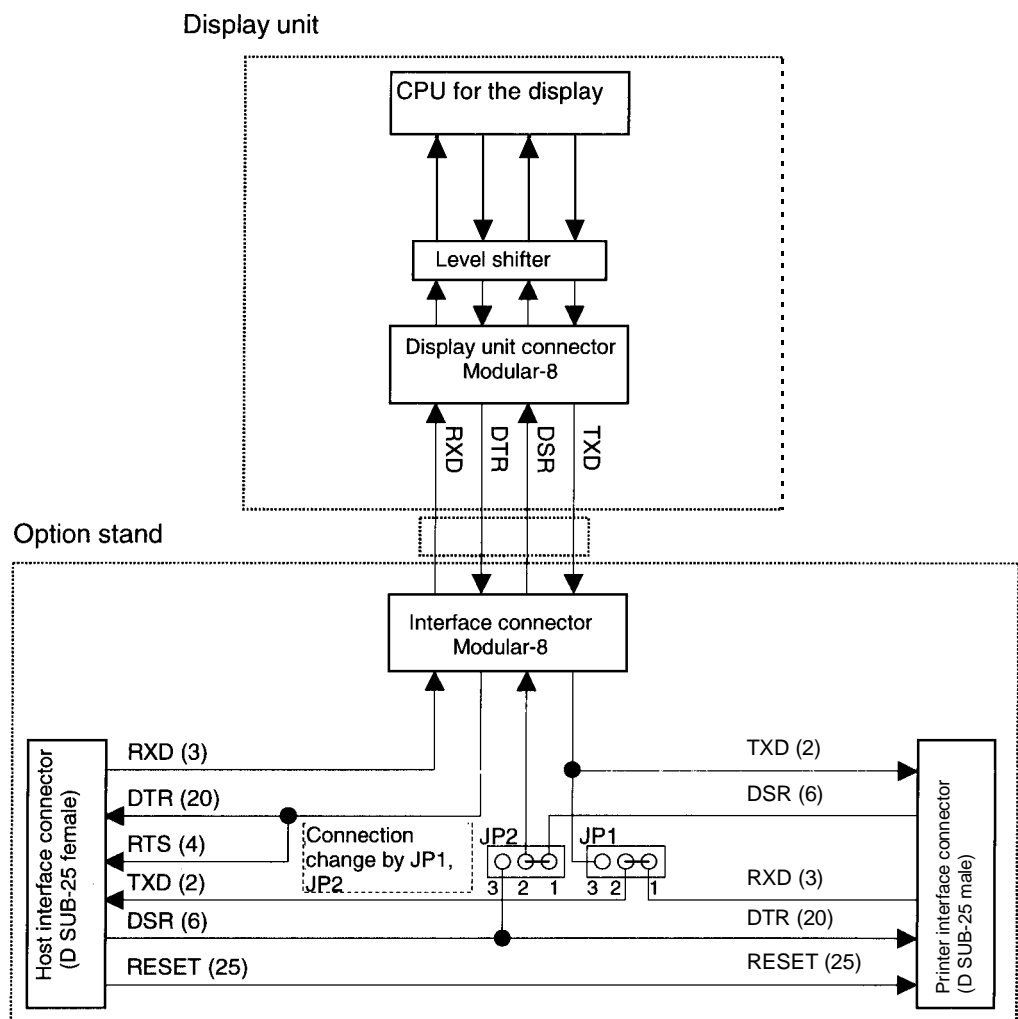

Figure 3.2.1 Interface Signal Connection Diagram

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 11	SHEET 10

Some functions depend on the device's connection to the DM-D210, such as whether a printer is connected or not, with a data pass through, or stand alone connection.

**Table 3.2.1 Connection Types**

Connection type	JP1	JP2	Function
Data pass through (default setting)	1-2	1-2	Can connect a printer which does not support the <b>ESC =</b> command.
Stand-alone connection	2-3	2-3	No printer is connected.

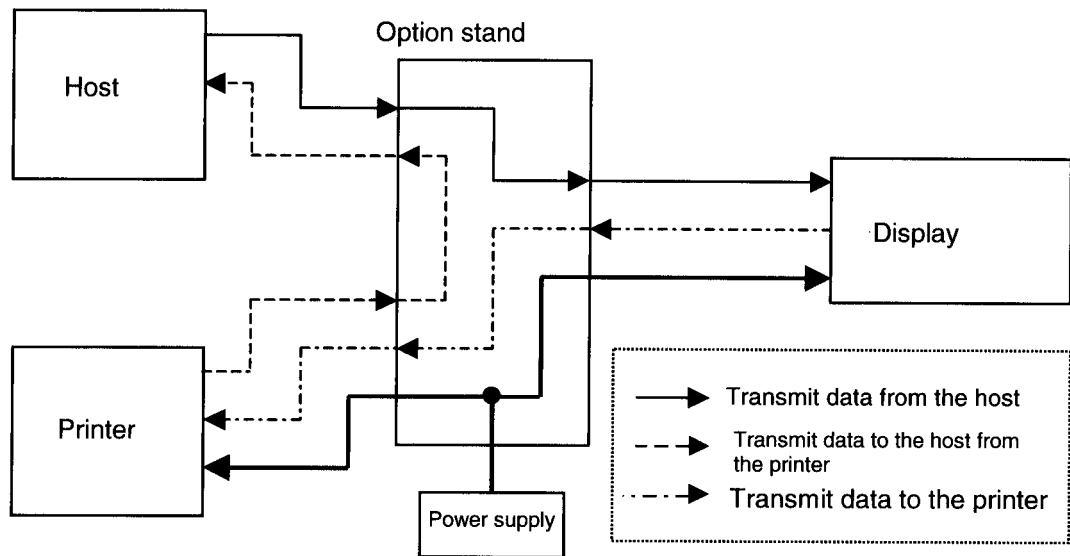

### 3.2.2 Selection of the connection types.

Either the stand-alone connection or the data pass through connection can be selected with the setting of the jumper JP1 and JP2 on the option stand.

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 12	SHEET 11

## 3.2.3 Pass through connection

Figure 3.2.2 shows the data flow when the DM-D210 is connected with the pass through.

**Figure 3.2.2 Data Flow in a Pass Through Connection**

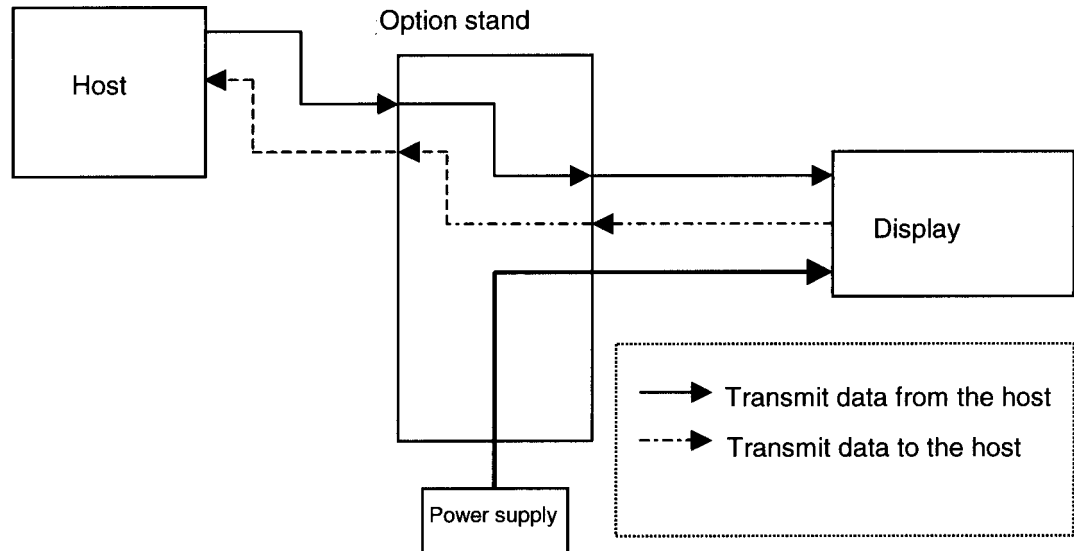

- 1) With the pass through connection, the DM-D210 stores the transmitted data from the host in the receive buffer of the DM-D210 and processes the data. In this case, the DM-D210 transmits only the data for the printer to the printer that is connected. On the other hand, the transmitted data from the printer is transmitted directly to the host, not through the mediation of the DM-D210.
- 2) The transmitted data from the host to the DM-D210 is identified whether it is data for the customer display or the data for the printer with the **ESC =** command.
- 3) The data communication condition of the DM-D210 with the DIP switch such as the baud rate, the data length, the parity must be same as the host and the printer.

EPSON	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 13	SHEET 12

## 3.2.4 Stand-alone connection

The stand-alone connection is required to connect the DM-D210, without the printer. In this case, the printer will be connected to another port than the one for the DM-D210.

Figure 3.2.3 shows the data flow when the DM-D210 is connected as a stand-alone.

**Figure 3.2.3 Data Flow in a Stand-alone Connection**

- 1) With the stand-alone connection, the data from the host is transmitted to the DM-D210, and the data from the DM-D210 is transmitted to the host. Therefore, the status data of the DM-D210 can be transmitted to the host.
- 2) The stand-alone connection is effective only when the customer display is selected with **ESC = 2** and either of the user setting commands is used.

EPSON	TITLE  DM-D210 Specification (STANDARD)	SHEET REVISION  E	NO.

### 3.3 Host Interface

#### 3.3.1 Host interface connector

The option stand provides the host interface connector (D-SUB 25 pin Female type) as shown in Figure 3.3.1.

**Figure 3.3.1 Host Interface Connector**

#### 3.3.2 Host interface connector signal assignments

**Table 3.3.1 Connector Signal Assignments**

Pin Number	Signal Name	Signal Direction	Function
1	FG	-	Frame ground
2	TXD	Output	1) When the DM-D210 is connected with a pass through connection: Transmit data to the host from the printer 2) When the DM-D210 is connected as a stand-alone: Transmit data to the host from the DM
3	RXD	Input	Receive data from the host (host → DM)
4 (*1)	RTS	Output	Same as DTR
6 (*2)	DSR	Input	Indicates whether the host is ready to receive data. [SPACE] The host is ready to receive data. [MARK] The host is not ready to receive data.
7	GND	--	Signal ground
20 (*1)	DTR	Output	This indicates whether the display is ready to receive data. [SPACE] The display can receive data. [MARK] The display cannot receive data. [DTR MARK] DTR goes to MARK under the following conditions: ① The period from when the power is turned on to when the display first becomes ready to receive data. ② When the self-test is executed. ③ When the remaining space in the receive buffer becomes 40 bytes or less (buffer-full state). ④ When [DSR MARK] is on, if the printer is selected by a peripheral device command. [DTR SPACE] DTR goes to SPACE under the following conditions: ① When the display first becomes ready to receive data after power-on. ② When the self-test has ended. ③ When the remaining space in the receive buffer becomes 50 bytes or more after it became 40 bytes or less once.
25	RESET	Input	Reset signal to the printer (host → printer)

NOTES (\*1): Make sure to use either one of the RTS or the DTR terminal. Otherwise, the built-in RS-232 driver IC may be broken.

## 3.4 Printer Interface

### 3.4.1 Printer interface connector

The option stand provides the printer interface connector (D-SUB 25 pin Female type) as shown in Figure 3.4.1.

Figure 3.4.1 Printer Interface Connector

### 3.4.2 Printer interface connector signal assignments

Table 3.4.1 Connector Signal Assignments

Pin Number	Signal Name	Signal Direction	Function
1	FG	--	Frame GND
2	TXD	Output	Transmit data to the printer (DM → Printer)
3	RXD	Input	Receive data from the printer (printer → host)
6	DSR	Input	This indicates whether the display is ready to receive data from the printer. [SPACE] The printer can receive data. When the printer becomes ready to receive data the SPACE is output. [MARK] The printer cannot receive data. Even if the printer becomes ready to receive data, the MARK is not output.
7	GND	-	Signal GND
20	DTR	Output	Indicates whether the host is ready to receive data. [SPACE] The host is ready to receive data. [MARK] The host is not ready to receive data.
25	RESET	Output	Reset signal to the printer (host → printer)

## 3.5 Power Supply Connector

### 3.5.1 About the type of power supply connector

The base unit of the DM-D210 provides two types of the power supply connector. One is used for the input terminals from the external power supply and the other is used for supplying the power to the printer. Both connectors have the same electrical characteristics (signal functions, signal direction, signal level). These connectors can be used for the DM-D210 power supply connector to the display interface board or the power supply connector to the printer.

### 3.5.2 Power supply connector Pin Layout

Type: 3-pin locking type connector.

**Figure 3.5.1 Power Supply Connector**

Connector model: Interface board side: TCS7960-532010 (Hoshiden)

### 3.5.3 Power supply connector

**Table 3.5.1 Power Supply Connector Pin Assignments**

Pin Number	Signal Name	Signal Direction	Signal Function
1	+24V	--	Power supply line
2	GND	--	GND
3	NC	--	Unused
SHELL	FG	--	Frame GND

## **4. FUNCTIONAL SPECIFICATIONS**

### **4.1 Switches**

#### **4.1.1 Power supply switch**

- 1) Feature: A power supply switch is located on the bottom of the display panel.
- 2) Function: Turns the power supply on/off.

#### **4.1.2 DIP switches**

- 1) Feature: A DIP switch is located on the back of the display panel.
- 2) Functions: Refer to Tables 4.1.1 and 4.1.2. The DIP switch settings are read only when the power is turned on. Therefore, changing the settings while the power is on has no effect.

**Table 4.1.1 DIP Switch 1**

SW No.	Function	ON	OFF	Default
1-1	Data reception errors	Ignores	Displays “?”	OFF
1-2	Data length	7 bits	8 bits	OFF
1-3	Parity	Parity	No parity	OFF
1-4	Parity selection	Even parity	Odd parity	OFF
1-5	Change baud rate	(Refer to Table 4.1.2)		ON
1-6				OFF
1-7				ON
1-8	Self-test execution (*1)	Executes	Does not execute	OFF

(\*1): When the power switch is turned on, the DM-D210 displays the continuous display pattern.

**Table 4.1.2 DIP Switch 1 Transmission Speed Switching**

SW1-5	SW1-6	SW1-7	Baud Rate (bps)
ON	ON	ON	2400
OFF	ON	ON	4800
ON	OFF	ON	9600
OFF	OFF	ON	19200
ON	ON	OFF	38400
OFF	ON	OFF	57600
ON	OFF	OFF	115200
OFF	OFF	OFF	(reserved)

(bps: bits per second)

			NEXT 18	SHEET 17

**4.1.3 Memory switch**

The following settings other than the DIP switch can be changed by software as shown in Table 4.1.3. These settings become effective after the power is turned on or initialization is executed by a command.

**Table 4.1.3 Memory Switch**

Memory SW	Function	Default	Content to be set	Range to be set
Msw 10	Character code table section	n = 0	Page 0 is selected	0-5, 16-19, 254, 255
11	International character set selection	n = 0	U.S.A. is selected.	0-13
12	Brightness adjustment	n = 4	100 %	1-4
13	Selection of the peripheral devices	n = 2	Display is selected	1-3
14	Cursor display	Selected	Selected	0, 1, 48, 49
15	Display No.	0	0	0-255

NOTE: Refer to **US ( E <Function 03>** in section 5.4 Command Details for details.

			NEXT 19	SHEET 18

**4.2. Commands List**

Control commands for the DM-D210 are summarized in Table 4.2.1.

**Table 4.2.1 DM-D210 Control Commands List**

Command	Function
<b>BS</b>	Move cursor left
<b>HT</b>	Move cursor right
<b>LF</b>	Move cursor down
<b>US LF</b>	Move cursor up
<b>HOM</b>	Move cursor to home position
<b>CR</b>	Move cursor to left-most position
<b>US CR</b>	Move cursor to right-most position
<b>US B</b>	Move cursor to bottom position
<b>US \$</b>	Move cursor to specified position
<b>CLR</b>	Clear display screen
<b>CAN</b>	Clear cursor line
<b>ESC =</b>	Select peripheral device(s)
<b>ESC @</b>	Initialize display
<b>ESC %</b>	Select/cancel user-defined character set
<b>ESC &amp;</b>	Define user-defined characters
<b>ESC ?</b>	Cancel user-defined characters
<b>ESC R</b>	Select an international character set
<b>ESC t</b>	Select character code table
<b>ESC W</b>	Select/cancel window range
<b>US MD1</b>	Specify overwrite mode
<b>US MD2</b>	Specify vertical scroll mode
<b>US MD3</b>	Specify horizontal scroll mode
<b>US E</b>	Set display screen blink interval
<b>US T</b>	Set and display counter (time)
<b>US U</b>	Display counter (time)
<b>US X</b>	Brightness adjustment
<b>US r</b>	Turn reverse mode on/off
<b>US v</b>	Status confirmation by DTR signal
<b>US @</b>	Execute self-test
<b>US :</b>	Start/end macro definition
<b>US ^</b>	Execute macro
<b>US .</b>	Display period
<b>US ,</b>	Display comma
<b>US ;</b>	Display semicolon (period + comma)
<b>US #</b>	Turn annunciator on/off
<b>US ( A</b>	Select display(s)
<b>US ( E</b>	User set-up commands

## 4.3.13 International character set

International characters listed in Table 4.3.14 can be changed by using the **ESC R** command. Refer to the description of the **ESC R** command in Section 5.3, Command Details.

**Table 4.3.14 International Character Set (Indicated Character Selection by Command)**

Country	ASCII code (Hex)											
	23	24	40	5B	5C	5D	5E	60	7B	7C	7D	7E
U.S.A	#	\$	@	[	\	]	^	`	{		}	~
France	#	\$	à	°	ç	§	^	`	é	ù	è	¨
Germany	#	\$	§	Ä	Ö	Ü	^	`	ä	ö	ü	ß
U.K.	£	\$	@	[	\	]	^	`	{		}	~
Denmark I	#	\$	@	Æ	Ø	Å	^	`	æ	ø	å	~
Sweden	#	¤	É	Ä	Ö	Å	Ü	é	ä	ö	å	ü
Italy	#	\$	@	°	\	é	^	ù	à	ò	è	ì
Spain I	Pt	\$	@	ı	Ñ	¿	^	`	ı	ñ	}	~
Japan	#	\$	@	[	¥	]	^	`	{		}	~
Norway	#	¤	É	Æ	Ø	Å	Ü	é	æ	ø	å	ü

Korea	#	\$	@	[	₩	]	^	`	{		}	~

## 4.4 Self-test

### 4.4.1 Starting the self-test

There are two ways to start the self-test, as follows:

- Use **US @** commands.
- Set the display to "Execute self-test" using DIP switch 1-8, and then turn on the power.

### 4.4.2 Ending the self-test

- After a series of self-tests is executed, the screen is cleared, the cursor is moved to the home position, and the display goes into the standby state.

### 4.4.3 Contents of the self-test

The self-test shows the following:

- Control ROM version.
- DIP switch states.
- Memory switch settings
- Display characters.
- Functions.

### 4.4.4 Notes

- 1) During the self-test, only the self-test is processed; data is not processed.
  - ① During the self-test, DTR (DM-D210 → host interface) goes to the MARK state.
  - ② The DM-D210 does not receive data during the self-test.
  - ③ The DM-D210 does not transmit data to the printer.
- 2) Upon the completion of the self test by the **US @** command, the following information and settings are held:
  - ① Contents of the receive buffer when receiving the self-test command and starting the self-test.
  - ② Defined contents of user-defined characters.
  - ③ Defined contents of the macro processing program.
  - ④ Counter (time) settings.

## 4.5 RAM Check

When the power is turned on, the built-in RAM is checked. If an error is detected, the following occurs:

- 1) The error message is displayed.
- 2) The display does not operate (idle state) until the power is turned off.

			NEXT 35	SHEET 34

## **5. COMMAND DESCRIPTIONS**

### **5.1 Command Notation**

<b>xxxx command</b>	<b>Describes the command headings.</b>
[Name]	The name of the command.
[Format]	The code sequence. ASCII indicates the ASCII equivalents. Hex indicates the hexadecimal equivalents. Decimal indicates the decimal equivalents. [x]k indicates the contents of the [ ] should be repeated k times. In this case, x changes in some commands.
[Range]	Gives the allowable ranges for the arguments.
[Description]	Describes the function of command.
[Notes]	Provides important information on setting and using the display command, if necessary.
[Default]	Gives the default values (if any) for the command arguments.
[Reference]	Lists related commands.
[Example]	Indicates the use of commands when opening a device file by assigning "#1" to the RS-232 port when using Microsoft® Basic.

### **5.2 Common Terms Used in the Command Descriptions**

1) Cursor:

The cursor is located at the position on the screen where the next character will be written. The position is indicated by the cursor.

2) Window:

The window is a general concept that specifies an area on the screen. Since the screen can be divided into a maximum of four areas (windows) using a command, and since different modes can be applied to each of them, each window behaves like a separate screen.

3) Current window:

The current window is the window that contains the cursor.

<b>EPSON</b>	TITLE  <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 36	SHEET 35

**5.3 Defaults (Initial State at Power-On)**

The contents of the initial state are shown in Table 5.3.1 below.

**Table 5.3.1 Initial State Setting Contents**

Setting Items	Setting Contents
Display mode	Overwrite mode
Position	Home position (the upper left corner of the window)
Screen	Clear
Window	Not defined
Character code table	Page 0 (*1)
International character set	U.S.A. (*1)
User-defined characters	Not defined
Macro definition	Not defined
Reverse characters	Canceled
Display blinking	Canceled
Brightness adjustment	100% (*1)
Peripheral device selection	Display (*1)
Set-up time	00:00

(\*1): Set by the memory switch.

## 5.4 Command Details

### BS

[Name]	Move cursor left		
[Format]	ASCII	BS	
	Hex	08	
	Decimal	8	
[Description]	Moves the cursor one character position to the left.		
[Notes]	<ul style="list-style-type: none"><li>• When the cursor is at the left end of a line, the operation of this command depends on the display mode, as follows:<ul style="list-style-type: none"><li>① Overwrite mode: When the cursor is at the left end of the lower line, it is moved to the right end of the upper line. When it is at the left end of the upper line, it is moved to the right end of the lower line.</li><li>② Vertical scroll mode: When the cursor is at the left end of the lower line, it is moved to the right end of the upper line. When it is at the left end of the upper line, the display on the upper line is scrolled to the lower line and the upper line is cleared. At this time, the cursor is moved to the right end of the upper line.</li><li>③ Horizontal scroll mode: All characters on the current line are scrolled one character to the right. The cursor is not moved, but the character area at the left end is cleared.</li></ul></li><li>• When a window is defined, the cursor is moved only within the current window.</li></ul>		
[Reference]	<b>US MD1, US MD2, US MD3, ESC W</b>		

### HT

[Name]	Move cursor right		
[Format]	ASCII	HT	
	Hex	09	
	Decimal	9	
[Description]	Moves the cursor one character position to the right.		
[Notes]	<ul style="list-style-type: none"><li>• When the cursor is at the right end of a line, the operation of this command depends on the display mode, as follows:<ul style="list-style-type: none"><li>① Overwrite mode: When the cursor is at the right end of the upper line, it is moved to the left end of the lower line. When it is at the right end of the lower line, it is moved to the left end of the upper line.</li><li>② Vertical scroll mode: When the cursor is at the right end of the upper line, it is moved to the left end of the lower line. When it is at the right end of the lower line, the display on the lower line is scrolled to the upper line and the lower line is cleared. At this time, the cursor is moved to the left end of the lower line.</li><li>③ Horizontal scroll mode: All characters on the current line are scrolled one character to the left. The cursor is not moved, but the character area at the left end is cleared.</li></ul></li><li>• When a window is defined, the cursor is moved only within the current window.</li></ul>

## LF

[Name]	Move cursor down		
[Format]	ASCII	LF	
	Hex	0A	
	Decimal	10	
[Description]	Moves the cursor down one line.		
[Notes]	<ul style="list-style-type: none"><li>• When the cursor is on the lower line, the operation of this command depends on the display mode, as follows:<ul style="list-style-type: none"><li>① Overwrite mode: The cursor is moved to the same column on the upper line.</li><li>② Vertical scroll mode: The characters displayed on the lower line are scrolled to the upper line, and the lower line is cleared. he cursor remains at the same position.</li><li>③ Horizontal scroll mode: The cursor is not moved.</li></ul></li><li>• When a window is defined, the cursor is moved only within the current window.</li></ul>		
[Reference]	<b>US MD1, US MD2, US MD3, ESC W</b>		

## US LF

[Name]	Move cursor up		
[Format]	ASCII	US	LF
	Hex	1F	0A
	Decimal	31	10
[Description]	Moves the cursor up one line.		
[Notes]	<ul style="list-style-type: none"><li>When the cursor is on the upper line, the operation of this command depends on the display mode, as follows:<ul style="list-style-type: none"><li>① Overwrite mode: The cursor is moved to the same column on the lower line.</li><li>② Vertical scroll mode: The characters displayed on the upper line are scrolled to the lower line, and the upper line is cleared. The cursor remains at the same position.</li><li>③ Horizontal scroll mode: The cursor is not moved.</li></ul></li><li>When a window is defined, the cursor is moved only within the current window.</li></ul>

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 39	SHEET 38

## HOM

[Name]	Move cursor to home position		
[Format]	ASCII	HOM	
	Hex	0B	
	Decimal	11	
[Description]	Moves the cursor to the left-most position on the upper line (home position).		
[Note]	Home position indicates the first column of the upper line. When a window is defined, the home position is the upper left corner of the window.		
[Reference]	<b>ESC W</b>		

## CR

[Name]	Move cursor to left-most position		
[Format]	ASCII	CR	
	Hex	0D	
	Decimal	13	
[Description]	Moves the cursor to the left-most position on the current line.		
[Note]	The cursor is moved only within the current window.		
[Reference]	<b>ESC W</b>		

## US CR

[Name]	Move cursor to right-most position		
[Format]	ASCII	US	CR
	Hex	1F	0D
	Decimal	31	13
[Description]	Moves the cursor to the right-most position on the current line.		
[Note]	The cursor is moved only within the current window.		
[Reference]	<b>ESC W</b>		

## US B

[Name]	Move cursor to bottom position		
[Format]	ASCII	US	B
	Hex	1F	42
	Decimal	31	66
[Description]	Moves the cursor to the bottom position.		
[Note]	The bottom position indicates the 20th column of the lower line. When a window is defined, the bottom position is the lower right corner of the window.		
[Reference]	<b>ESC W</b>		

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.

## US \$ *n m*

[Name]	Move cursor to specified position				
[Format]	ASCII	US	\$	<i>n</i>	<i>m</i>
	Hex	1F	24	<i>n</i>	<i>m</i>
	Decimal	31	36	<i>n</i>	<i>m</i>
[Range]	$1 \leq n \leq 20$ $m = 1 \text{ or } 2$				
[Description]	Moves the cursor to the <i>n</i> th column on the <i>m</i> th line.				
[Note]	If a value exceeding the range is specified for <i>n</i> (column) and/or <i>m</i> (line), this command is ignored and the cursor does not move.				

## CLR

[Name]	Clear display screen	
[Format]	ASCII	CLR
	Hex	0C
	Decimal	12
[Description]	Clears all the displayed characters.	
[Notes]	<ul style="list-style-type: none"><li>• After the command is executed, the cursor moves to the home position.</li><li>• When a window is defined, the cursor is moved only within the current window.</li></ul>	
[Reference]	<b>ESC W</b>	

## CAN

[Name]	Clear cursor line	
[Format]	ASCII	CAN
	Hex	18
	Decimal	24
[Description]	Clears the line containing the cursor.	
[Notes]	<ul style="list-style-type: none"><li>• After this command is executed, the cursor moves to the left-most position on the current line.</li><li>• When a window is defined, the cursor is moved only within the current window.</li></ul>	
[Reference]	<b>ESC W</b>	

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 41	SHEET 40

## ESC = $n$

[Name]	Select peripheral device			
[Format]	ASCII	ESC	=	$n$
	Hex	1B	3D	$n$
	Decimal	27	61	$n$
[Range]	$1 \leq n \leq 3$			
[Description]	Selects the device(s) to which the host computer sends data, using the value(s) of $n$ from the following table:			

**Table 4.4.1 Bit table for select peripheral device**

Bit	Off/On	Hex	Decimal	Function
0	Off(*)	00	0	Printer canceled.
	On	01	1	Printer selected.
1	Off	00	0	Display canceled.
	On(*)	02	2	Display selected.
2 to 7	--	--	--	Undefined.

(\*):Default setting

- [Notes]
- When the printer is selected by  $n = 1$ , all the data from the host computer is transmitted to the printer via the display.
  - When the customer display is selected by  $n = 2$ , all the data from the host computer is processed internally in the display, and no data is transmitted to the printer.
  - When both the printer and customer display are selected by  $n = 3$ , all the data from the host computer is processed internally in the display and is simultaneously transmitted to the printer.
  - If **ESC = 2** is received when the printer is selected by  $n = 1$  or  $n = 3$ , this command sends 1BH (27) 3DH (61) 02H (2) to the printer and stops transmitting data to the printer.
  - If **ESC = 1** is received when the customer display is selected by  $n = 2$ , this command sends 1BH (27) 3DH (61) 01H (1) to the printer and starts transmitting data to the printer.
  - If **ESC = 3** is received when the customer display is selected by  $n = 2$ , this command sends 1BH (27) 3DH (61) 03H (3) to the printer and starts transmitting data to the printer.
  - If **ESC = 2** is received again after selecting the display by  $n = 2$ , the three-byte data is executed only inside the display, and nothing is sent to the printer.
  - With the pass through connection, when the **ESC =** command is received while the printer is selected with  $n = 1$  or  $n = 3$ , if  $n$  following **ESC =** is not 1, 2, or 3, the display unit sends the whole of the **ESC =  $n$**  to the printer directly.

[Default]  $n = 2$  or the setting value by the memory switch 13

[Example]

PRINT #1;CHR\$(&H1B);CHR\$(&H3D);CHR\$(&H1);	①
PRINT #1,"SELECT PRINTER";	②
PRINT #1,CHR\$(&H1B);CHR\$(&H3D);CHR\$(&H2);	③
PRINT #1,"SELECT DISPLAY";	④

**Figure 5.4.1 Example Peripheral Device Selection Program**

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  F	NO.	
			NEXT 42	SHEET 41

# Confidential

- Data in lines ① and ③ is processed internally in the display and sent to the printer simultaneously.
- Data in line ② is sent to the printer regardless of display execution.
- Data in line ④ only appears on the display screen, and nothing is sent to the printer.

## ESC @

[Name]	Initialize display		
[Format]	ASCII	ESC	@
	Hex	1B	40
	Decimal	27	64
[Description]	Resets the various display settings to their initial values.		
[Notes]	<ul style="list-style-type: none"> <li>• The software settings are reset to their power-on values.</li> <li>• The DIP switches are not checked again.</li> <li>• The data in the receive buffer is not cleared</li> <li>• After initializing the display, the display screen is cleared and the cursor moves to the home position.</li> </ul>		
[Reference]	Section 5.3, Defaults		

## ESC % n

[Name]	Select/cancel user-defined character set			
[Format]	ASCII	ESC	%	<i>n</i>
	Hex	1B	25	<i>n</i>
	Decimal	27	37	<i>n</i>
[Range]	$0 \leq n \leq 255$			
[Description]	Selects or cancels the user-defined character set.			
[Notes]	<ul style="list-style-type: none"> <li>• When <i>n</i> is 1, the user-defined character set is selected. When the user-defined character set is not defined using the <b>ESC &amp;</b> command, the internal character set is displayed.</li> <li>• When <i>n</i> is 0, the user-defined character set is canceled. (The internal character set is selected.) In this case, this command has no effect on the user-defined characters that have already been defined using the <b>ESC &amp;</b> command.</li> <li>• This command has no effect on the characters already displayed.</li> </ul>			
[Default]	<i>n</i> = 0			
[Reference]	<b>ESC &amp;</b>			

## ESC & s n m [a [p]s x a] (m - n + 1)

[Name]	Define user-defined characters						
[Format]	ASCII	ESC	&	<i>s</i>	<i>n</i>	<i>m</i>	<i>[a [p] s x a] m - n + 1</i>
	Hex	1B	26	<i>s</i>	<i>n</i>	<i>m</i>	<i>[a [p1 p2 ...ps] x a] m - n + 1</i>
	Decimal	27	38	<i>s</i>	<i>n</i>	<i>m</i>	<i>[a [p] s x a] m - n + 1</i>
[Description]	Defines user-defined characters.						
[Range]	<i>s</i> = 1						
	$32 \leq n \leq m \leq 126$						
	$0 \leq a \leq 5$						
	$0 \leq p1 \dots ps \ x \ a \leq 255$						

EPSON	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  F	NO.	
			NEXT 43	SHEET 42

[Notes]

Defines user-defined characters.

- $s$  denotes the number of bytes in the vertical direction.
- $n$  specifies the beginning character code for the definition, and  $m$  specifies the final character code. When only one character is defined, use  $n = m$ .
- 95 characters can be defined between character codes 20H (32) and 7EH (126) in the character code table.
- $a$  denotes the number of dots in the horizontal direction. When  $a < 5$ , the remaining dots on the right side of the user-defined characters are padded with spaces.
- $p1 \dots pk$  is the dot data to be defined for the characters. This indicates the dot pattern for a dots in the horizontal direction from the left side.
- The number of data items to be defined is  $s \times a$ . When 8 bits are specified for the communication word length, the most significant bit is ignored.
- Once the user-defined characters are defined, they remain effective until they are redefined, **ESC @** is executed, or the power is turned off.
- When only the user-defined characters are defined and the user-defined character set is not selected using the **ESC %** command, the user-defined characters are not displayed.

[Default]

Not defined.

[Reference]

**ESC %**, **ESC ?**, Section 1.2, Character Specifications

[Example]

To define the character "" at character code 20H (32):

**Figure 5.4.2 Example Bit image Specification**

- When the communication word length is specified as seven bits, or when the word length is specified as eight bits and the most significant bit is processed as "0," the user-defined character definition is executed as shown below:

```
PRINT #1 CHR$(&H1B);CHR$(&H26);CHR$(&H1);
PRINT #1 CHR$(&H20);CHR$(&H20);CHR$(&H5);
PRINT #1 CHR$(&H20);CHR$(&H41);CHR$(&H3F);CHR$(&H41);CHR$(&H20);
```

**Figure 5.4.3 Example Bit image Specification**

- When the communication word length is specified as eight bits and the most significant bit is processed as "1," the user-defined character definition is executed as shown below:

```
PRINT #1 CHR$(&H1B);CHR$(&H26);CHR$(&H1);
PRINT #1 CHR$(&H20);CHR$(&H20);CHR$(&H5);
PRINT #1 CHR$(&HA0);CHR$(&HC1);CHR$(&HBF);CHR$(&HC1);CHR$(&HA0);
```

**Figure 5.4.4 Example Bit image Specification**

## ESC ? *n*

[Name]	Cancel user-defined characters			
[Format]	ASCII	ESC	?	<i>n</i>
	Hex	1B	3F	<i>n</i>
	Decimal	27	63	<i>n</i>
[Range]	$32 \leq n \leq 126$			
[Description]	Cancels user-defined characters.			
[Notes]	<ul style="list-style-type: none"><li>• This command cancels the pattern defined for the character code specified by <i>n</i>.</li><li>• If specified code is transmitted after the pattern is canceled by this command, the internal character is displayed.</li><li>• If the specified character code is not defined, this command is ignored.</li><li>• This command has no effect on characters already displayed.</li></ul>			
[Reference]	<b>ESC &amp;</b>			

## ESC R *n*

[Name]	Select an international character set			
[Format]	ASCII	ESC	R	<i>n</i>
	Hex	1B	52	<i>n</i>
	Decimal	27	82	<i>n</i>
[Range]	$0 \leq n \leq 13$			
[Description]	Selects an international character set <i>n</i> from the following table:			

**Table 5.4.2 Parameters for international Character Set**

<i>n</i>	Character Set
0	U.S.A.
1	France
2	Germany
3	U.K.
4	Denmark I
5	Sweden
6	Italy
7	Spain I
8	Japan
9	Norway
10	Denmark II
11	Spain II
12	Latin America
13	Korea

[Default]	<i>n</i> = 0 or the setting value by the memory switch 11.
[Reference]	Section 4.3.13, International Character Set

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 45	SHEET 44

## ESC t *n*

[Name]	Select character code table			
[Format]	ASCII	ESC	t	<i>n</i>
	Hex	1B	74	<i>n</i>
	Decimal	27	116	<i>n</i>
[Range]	$0 \leq n \leq 5, 16, 17, 18, 19, 254, 255$			
[Description]	Selects a page <i>n</i> from the character code table.			
[Notes]	<ul style="list-style-type: none"> <li>This command has no effect on data displayed before this command is received.</li> <li>This command has no effect on the selected international character set.</li> </ul>			
[Default]	<i>n</i> = 0 (Page 0 is selected.) or the setting value by the memory switch 10.			
[Reference]	Section 4.3, Character Code Tables			

## ESC W *n m (x1 y1 x2 y2)*

[Name]	Select/cancel window range				
[Format]	ASCII	ESC	W	<i>n</i>	<i>m (x1 y1 x2 y2)</i>
	Hex	1B	57	<i>n</i>	<i>m (x1 y1 x2 y2)</i>
	Decimal	27	87	<i>n</i>	<i>m (x1 y1 x2 y2)</i>
[Range]	$1 \leq n \leq 4$				
	$m = 0, 1, 48, 49$				
	$1 \leq x1 \leq x2 \leq 20$				
	$1 \leq y1 \leq y2 \leq 2$				
[Description]	Selects or cancels a single window on the display screen.				
[Notes]	<ul style="list-style-type: none"> <li><i>n</i> specifies the window number to be selected or canceled.</li> </ul>				
	<ul style="list-style-type: none"> <li><i>m</i> specifies selection or cancellation.</li> </ul>				
	When <i>m</i> = 1 or 49, a window is selected. (Values <i>x1</i> , <i>y1</i> , <i>x2</i> , and <i>y2</i> are required.)

[Example]

1) Counter display just before receiving **UST h m**:

Figure 5.4.8 Example Display Before Setting the Counter

2) **UST h m**(1FH(31)54H(84)14 15)is received:

Figure 5.4.9 Example Counter Setting Indication

screen (Figure 5.4.8) is cleared, and the input time is displayed at the right side of the lower line; counting begins from 14:15:00 seconds. At this time, the cursor moves to the home position indicated by . □

3) Display data (“ABC”) is received:

Figure 5.4.10 Example Indication When the Cursor Does Not Move

counter display in the bottom line has no effect on data displayed in the top line.

4) **LF**(10H(16)) is received:

Figure 5.4.11 Example Indication When the Cursor Moves

Moving the cursor to the bottom line clears the time display, but counting continues internally. (Figure 4.4.11 shows assumed overwrite mode.)

## US X *n*

[Name]	Brightness adjustment			
[Format]	ASCII	US	X	<i>n</i>
	Hex	1F	58	<i>n</i>
	Decimal	31	88	<i>n</i>
[Range]	$1 \leq n \leq 4$			
[Description]	Sets the brightness of the fluorescent character display tube. <i>n</i> selects the percentage of brightness as follows:			

**Table 5.4.3 Parameters for Brightness Adjustment**

<i>n</i>	Brightness
1	20%
2	40%
3	60%
4	100%

[Default]  $n = 4$  or the setting value by the memory switch 12

## US r *n*

[Name]	Select/cancel reverse characters			
[Format]	ASCII	US	r	<i>n</i>
	Hex	1F	72	<i>n</i>
	Decimal	31	114	<i>n</i>
[Range]	$n = 0, 1, 48, 49$			
[Description]	Selects or cancels reverse display of the characters received after this command. <ul style="list-style-type: none"> <li>When <math>n = 1</math> or 49, reverse characters are selected.</li> <li>When <math>n = 0</math> or 48, reverse characters are canceled.</li> </ul>

## US :

[Name] Start/end macro definition

[Format] ASCII US :  
Hex 1F 3A  
Decimal 31 58

[Description] Starts or ends a macro definition.

- [Notes]
- Up to 80 bytes can be defined for macro processing (one byte per character).
  - Macro definition processing starts with the first **US :** command and ends with the second **US :** command.
  - Receipt of either of the two types of data shown below is regarded as a macro definition error. Macro definition processing is stopped, and any following data is processed as normal data. At this time, the macro remains undefined.
    - 1) The **US ^** command is received during a macro processing definition.
    - 2) A macro processing definition exceeds 80 bytes (except for the **US :** command).
  - To delete a macro definition, send a **US :** command just after **US :**.

[Reference] **US ^**

[Example]

```
PRINT#1,CHR$(&H1F);CHR$(&H3A);_____ ①
PRINT#1,CHR$(&HC);_____ ②
PRINT#1,CHR$(&H1F);CHR$(&H45);CHR$(0);_____ ③
PRINT#1," Execution MACRO !!";_____ ④
PRINT#1,CHR$(&H1F);CHR$(&H45);CHR$(10);_____ ⑤
PRINT#1,CHR$(&H1F);CHR$(&H3A);_____ ⑥
```

**Figure 5.4.12 Example Macro Definition Processing Program**

- ① is the starting command and ⑥ is the ending command of a macro definition.
- The 26-byte data from ② to ⑤ is stored in the macro definition range. When the display receives the macro execution command, the defined data is in processed order. (Refer to **US ^**.)
- ② is a screen clear command. (Refer to **CLR**.)
- ③ and ⑤ are blinking commands. (Refer to **US E**.)

When <math>m = 0</math>, all the displays are selected regardless of the previous-set value. When <math>m \neq 0</math>, the display of the device number specified with <math>m</math> is selected.</li> </ul>							

## US ( E $pL$ $pH$ $n$ [ $parameter$ ])

[Name]

User setting commands

[Description]

- Executes the process of the user setting commands.

$n$	Function No.	Function
1	Function 01	Changes into the user setting mode.
2	Function 02	Ends the user setting mode session. (Performs a software reset.)
3	Function 03	Sets value(s) for the memory switch.
4	Function 04	Transmits the settings of the memory switch to the host.

- $pL$ ,  $pH$  specifies ( $pL + (pH \times 256)$ ) as the number of bytes after  $pH$  ( $n$  and  $[parameter]$ ).
- $n$  specifies the function code.
- The customer display must be in the user setting mode before this command can change values in the NV memory.
- In Function 02, the customer display performs software reset. Therefore, the customer display clears the receive buffer, and resets all settings (user-defined characters, macros, the setting of window, and etc.,) and the display to the mode in effect at power on.
- All customized values in the memory switch set by this command can be read by Function 04 or the command, even though the customer display does not enter the user-defined mode.

<b>EPSON</b>	TITLE <b>DM-D210</b> Specification (STANDARD)	SHEET REVISION  E	NO.	
			NEXT 60	SHEET 59

- [Notes]
- Only when the customer display is connected as a stand-alone, the host PC can receive the transmit data from the display.
  - Frequent write commands to NV memory may damage to the NV memory. Therefore, it is recommended to write to the NV memory 50 times or less a day.
  - During processing of this command, the customer display is BUSY while writing the data to the NV user memory and stops receiving data. Therefore, it is prohibited to transmit data while the display is BUSY.

## <Function 01> **US ( E *pL pH n d1 d2***

[Format]	ASCII	US	(	E	<i>pL</i>	<i>pH</i>	<i>n</i>	<i>d1</i>	<i>d2</i>

[Range] ( $pL + pH \times 256$ ) = 3 ( $pL = 3$ ,  $pH = 0$ )  
 $n = 1$   
*d1* = 73 (Character "I")  
*d2* = 78 (Character "N")

[Description] • Changes into the user setting mode and transmits the following data:

Transmitted data	Hex	Decimal	Number of data
① Header	57H	87	1 byte
② Flag	23H	35	1 byte
③ Display number	30 – 39H	48 – 57	0 – 2 bytes
④ Separate code	1FH	31	1 byte
⑤ NUL	00H	0	1 byte

## <Function 02> **US ( E *pL pH n d1 d2 d3***

[Format]	ASCII	US	(	E	<i>pL</i>	<i>pH</i>	<i>n</i>	<i>d1</i>	<i>d2</i>	<i>d3</i>
	Hex	1F	28	45	04	00	02	4F	55	54
	Decimal	31	40	69	4	0	2	79	85	84

[Range] ( $pL + pH \times 256$ ) = 4 ( $pL = 4$ ,  $pH = 0$ )  
 $n = 2$   
*d1* = 79 (Character "O")  
*d2* = 85 (Character "U")  
*d3* = 84 (Character "T")

[Description] • Ends the user setting mode session and performs a software reset.

## <Function 03> **US ( E *pL pH n [a1 b18...b11]...[ak bk8...bk1]***

[Format]      ASCII      US (      E      *pL pH n [a1 b18 ... b11] ... [ak bk8 ... bk1]*  
                  Hex      1F 28 45 *pL pH 03 [a1 b18 ... b11] ... [ak bk8 ... bk1]*  
                  Decimal      31 40 69 *pL pH 3 [a1 b18 ... b11] ... [ak bk8 ... bk1]*

[Range]       $10 \leq (pL + pH \times 256) \leq 65530$   
                  (where  $(pL + pH \times 256) = 9 \times k + 1$ :  $0 \leq pL \leq 255$ ,  $0 \leq pH \leq 255$ )  
                   $n = 3$   
                   $a = 10$  through  $15$   
                   $b = 48, 49, 50$   
                   $1 \leq k \leq 7281$

[Default at factory]

Refer to the following table for the setting of the memory switch.

- [Description]      • Change the memory switch specified by  $a$  to the values specified with  $b$ .
- When  $b = 48$ , the applicable bit is turned to Off.
  - When  $b = 49$ , the applicable bit is turned to On.
  - When  $b = 50$ , the applicable bit is not changed.
  - The specific value corresponds some of bits in bit 8 (MSB) to bit 1 (LSB)

Function	Item to be set	Memory SW	Default	Setting range	Action when the parameter is specified out of range
Character code table	Page 0	MSW10	$n = 0$	0-5, 16-19, 254, 255	Nothing to do
International character set	U.S.A	MSW11	$n = 0$	0-13	Nothing to do
Brightness adjustment	100%	MSW12	$n = 4$	1-4	Nothing to do
Peripheral device selection	Display	MSW13	$n = 2$	1-3	Nothing to do
Cursor display	Selected	MSW14	Specific value	0, 1, 48, 49	Nothing to do
Display number	0	MSW15	0	0-255	--

## <Function 04> **US ( E pL pH n a**

[Format]	ASCII	US	(	E	pL	pH	n	a
	Hex	1F	28	45	02	00	04	a
	Decimal	31	40	69	2	0	4	a

[Range] (  $pL + pH \times 256$  ) = 2 (  $pL = 2$ ,  $pH = 0$  )  
 $n = 4$   
 $a = 10$  through  $16$

[Description] • Transmits the setting value(s) of the memory switch specified by  $a$ .

Transmitted data	Hex	Decimal	Number of data
① Header	57H	87	1 byte
② Flag	24H	36	1 byte
③ Display number	30 – 39H	48 – 57	0 – 2 bytes
④ Separate code	1FH	31	1 byte
⑤ Data	30 or 31H	48 or 49	8 bytes
⑥ NUL	00H	0	1 byte

- Configuration of data as shown in ⑤ is transmitted as 8 bytes.

The setting data in the memory switch [Off: Hex=30H / Decimal=48, On; Hex=31H / Decimal=49] or a data string in the decreasing order from bit 8 to bit 1 as follows:

Example:

Switch	Msw10-8	Msw10-7	Msw10-6	Msw10-5	Msw10-4	Msw10-3	Msw10-2	Msw10-1
Status	OFF	OFF	OFF	ON	OFF	OFF	ON	ON

Transmit data for the memory settings above are 8 bytes of "00010011" (30H, 30H, 30H, 31H, 30H, 30H, 31H, 31H).

### 5.5 Ignored Commands

The DM-D210 customer display ignores the following ESC/POS commands:

**US C n** (Specify on/off of annunciator)

### 5.6 Unconditional Transmitted Commands

When the DM-D210 receives the following command, the DM-D210 transmits the same data regardless of the conditions of DSR.

**DLE xx** (real-time command)

Data is transmitted if the following codes are transmitted after the **DLE** command.

00H–08H, 10H, 12H, 14H

## **APPENDIX. SIGNALS CONNECTION BETWEEN DM AND PC**

Use a cable which connects signals as shown below using a DTR-DSR handshaking method between the customer display and the host PC.
