| [Format] | ASCII | GS | a | n |

|  | Decimal | 29 | 97 | n | as follows :

| Bit | Off/On | Hex | Decimal | Status for ASB |
| :---: | :---: | :---: | :---: | :--- |
| 0 | Off | 00 | 0 | Drawer kick-out connector pin 3 status disabled. |

| 3 | Off | 00 | 0 | Paper roll sensor status disabled. |
|  | On | 08 | 8 | Paper roll sensor status enabled. |
| $4-7$ | - | - | - | Undefined. |

[Details] * If any of the status items in the table above are enabled, the printer transmits the status when this command is executed. The printer automatically transmits the status whenever the enabled status item changes. The disabled status items may change, in this case, because each status transmission represents the current status.

* If all status items are disabled, the ASB function is also disabled.
* If the ASB is enabled as a default, the printer transmits the status when the printer data reception and transmission is possible at the first time from when the printer is turned on.
* The following four status bytes are transmitted without confirming whether the host is ready to receive data. The four status bytes must be consecutive, except for the XOFF code.
* Since this command is executed after the data is processed in the receive buffer, there may be a time la between data reception and status transmission.
* When the printer is disabled by ESC= (Select peripheral device), the four status bytes are transmitted whenever the status changes.
* The status to be transmitted are as follows :

First byte (printer information)

| Bit | Off/On | Hex | Decimal | Status for ASB |
| :---: | :---: | :---: | :---: | :--- |

|  | On | 40 | 64 | Automatically recoverable error occurred. |
| 7 | Off | 00 | 0 | Not used. Fixed to Off. |

Bit 3 : If these errors occur due to paper jams or the line, it is possible to recover by correcting the cause of the error and executing DLE ENQ $n(1 \leq n \leq 2)$. If an error due to a circuit failure (e.g. wire break) occurs, it is impossible to recover.

Bit 6 : When printing is stopped due to high print head temperature until the print head temperature drops sufficiently or when the paper roll cover is open during printing, bit 6 is On.
