[When CODE128 ( $\mathrm{m}=73$ ) is used :]

- Refer to Appendix J for the information of the CODE128 bar code and its code table.
- When using the CODE128 in this printer, take the following points into account for data transmission :
(1) The top of the bar code data string must be code set selection character (any of CODE A, CODE B OR CODE C) which selects the first code set.
※ Description of the CODE128 Bar Code
In CODE128 bar code system, it is possible to represent 128 ASCII characters and 2-digit numerals using one bar code character that is defined by combining one of the 103 bar code characters and 3 code
sets. Each code set is used for representing the following characters :
* Code set A : ASCII characters 00 H to 5 FH
* Code set B : ASCII characters 20H to 7FH
* Code set C : 2-digit numeral characters using one character (100 numerals from 00 to 99)

The following special characters are also available in CODE128 :

* SHIFT characters In code set A, the character just after SHFIT is processed as a character for code set B. In code set B, the character just after SHIFT is processed as the character for code set A. SHIFT characters cannot be used in code set $C$.
* Code set selection character (CODE A, CODE B, CODE C)

This character switches the following code set to code set $A, B$, or $C$.

* Function character (FNC1, FNC2, FNC3, FNC4)

The usage of function characters depends on the application software. In code set C, only FNC 1 is available.
(2) Special characters are defined by combining two characters "\{" and one character. The ASCII character "\{" is defined by transmitting "\{" twice consecutively.

| Specific character | Transmit data |  |  |
| :---: | :---: | :---: | :---: |
|  | ASCII | Hex | Decimal |
| SHIFT | $\{\mathrm{S}$ | $7 \mathrm{~B}, 53$ | 123,83 |
| CODE A | $\{\mathrm{A}$ | $7 \mathrm{~B}, 41$ | 123,65 |
| CODE B | $\{\mathrm{B}$ | $7 \mathrm{~B}, 42$ | 123,66 |
| CODE C | $\{\mathrm{C}$ | $7 \mathrm{~B}, 43$ | 123,67 |
| FNC1 | $\{1$ | $7 \mathrm{~B}, 31$ | 123,49 |
| FNC2 | $\{2$ | $7 \mathrm{~B}, 32$ | 123,50 |
| FNC3 | $\{3$ | $7 \mathrm{~B}, 33$ | 123,51 |
| FNC4 | $\{4$ | $7 \mathrm{~B}, 34$ | 123,52 |
| " " | $\{\{$ | $7 \mathrm{~B}, 7 \mathrm{~B}$ | 123,123 |

<Example> Example data for printing "No. 123456"
In this example, the printer first prints "No." using CODE B, then prints the following numbers using CODE C.

## $\begin{array}{lllllllllllll}\text { GS k } & 73 & 10 & 123 & 66 & 78 & 111 & 46 & 123 & 67 & 12 & 34 & 56\end{array}$ <br> 

* If the top of the bar code data is not the code set selection character, the printer stops command processing and processes the following data as normal data.
* If combination of "\{" and the following character does not apply any special character, the printer stops command processing and processes the following data as normal data.
* The printer does not print HRI characters that correspond to the shift characters or code set selection characters.
* HRI character for the function character is space.
* HRI characters for the control character ( $<00>\mathrm{H}$ to $<1 \mathrm{~F}>\mathrm{H}$ and $<7 \mathrm{~F}>\mathrm{H}$ ) are space.
<Others> Be sure to keep spaces on both right and left sides of a bar code. (Spaces are different depending on the types of the bar code.)
